Sphincterotome

www.meditechdevices.com

Sphincterotome is a specialized catheter with a cutting wire used in endoscopic retrograde cholangiopancreatography (ERCP) for making an incision in the sphincter of Oddi or papilla of Vater, allowing for drainage or removal of stones from the bile and pancreatic ducts.

Triple-Lumen Sphincterotomes

- These have three separate lumens for guidewire, cutting wire, and contrast injection, offering more versatility and control during the procedure
