Ureteral Balloon Dilator set

www.meditechdevices.com

Product use

Ureteral Balloon Dilator Used for ureteral dilation prior to ureteral stone manipulation or ureteroscopy, as well as for dilation of the intramural ureter. Radiopaque markers indicate the proximal and distal ends of the balloon. The pin-vise handle stabilizes the wire guide during the introduction of the dilator.

Features & Benefits

- Designed with kink resistant shaft and tapered distal end to facilitate negotiation of tight, tortuous ureteral tracts
- Radiopaque marker bands enhance visualization of balloon position under fluoroscopy
- Controlled inflation pressure up to 20ATM, facilitating high pressure dilation of narrow strictures
- Shaft size -5Fr X 75cm – balloon size – 5mm x 5cm , 6mm x 6cm
